

Work Order Request (WORQ) Process

BMO | JLL MTS The WORQ itself is the FM's heads-up • \$499 NTE is a hard stop

Updated since v4 (pictured above): the separate "call the FM before submitting" step has been dropped. The WORQ email now carries full detail up front — location, cost, condition, the tech's repair/replace and capital-type recommendation — so the FM can decide how to handle it from the submission itself, without a prior call. The tech isn't the final decision-maker on vendor, repair-vs-replace, or capital classification — those are recommendations the FM confirms. The steps and template below reflect the current process; the diagram above is kept for historical reference.

Page 1 — Process Steps

#	Step	Owner	Description
1	Identify the Issue	MTS Tech	Tech finds a problem, an aging asset, or a need for third-party assistance.
2	Send the WORQ Email	MTS Tech	Email <code>crewos@bmo.com</code> with WORQ at the start of the body, using the template below. Required for every job; counts toward the 8 per month. Jobs over \$499 NTE are flagged in the email itself so the FM knows to review before work proceeds.
3	Work Order Created	FMS + FM	FMS sort the central mailbox and create the WO with its NTE. Jobs over \$499 also need the estimate approved in Carego.
4	Perform the Work	MTS / Vendor	Complete the work, internal MTS or third-party, within the WO's NTE.
STOP	Hard Stop at \$499 NTE	—	Nothing beyond the NTE is spent, ordered, or committed until the FM approves and the NTE is raised on the WO. Emergency or safety issue: make it safe within the NTE, then stop and call the FM.
5	Close Out & Classify	MTS + FM	Confirm actual cost is within the approved NTE, then classify the job as Repair (OPEX), Unplanned Capital, or Future Capital.

Page 2 — WORQ Email Template

To: `crewos@bmo.com` Body starts with: **WORQ**

The FMS use these fields to create the work order. Shaded fields are new additions.

Field (copy into the email)	Why it matters
Location:	Site the work is for.
FM:	Facility Manager for the site.
Priority (Rush, Normal):	Sets urgency for the FMS.
WO Description:	What is wrong and the work needed.
NTE:	Not-to-exceed amount. \$499 is the standard; anything over needs FM approval before work proceeds.
Recommended Vendor:	Tech's suggested third-party vendor, if any — the FM decides who's actually used.
Asset / Equipment (unit, model/serial):	Identifies the exact equipment for tracking and capital planning. Not needed when Resource needed is Third-party.
Resource needed (Internal MTS / Third-party / Not sure):	Shows whether the request is a labor assignment or a vendor spend.
Repair or Replace:	Tech's recommendation; drives the OPEX vs. capital decision, FM has final say.
Labor & Materials estimate:	Breaks out the cost behind the NTE.
Age / condition of asset:	Approximate age; failing, degraded, or fine.
Remaining life estimate:	Rough range. Feeds future capital planning.
Capital type (Repair / Unplanned Capital / Future Capital):	Tech's recommendation; FM confirms.
Photos attached (Y/N):	Lets the FM and FMS review scope without a site visit.

Job Classification

Type	Definition
Repair (OPEX)	Restores existing equipment to working order. Funded from the operating budget.
Unplanned Capital	Failed or failing equipment that must be replaced now and is not in the capital plan.
Future Capital	Aging or end-of-life equipment that is still running. Logged to feed FM's capital planning; no work needed yet.

Key Rules

- **Hard stop at \$499 NTE.** Nothing beyond the NTE is spent, ordered, or committed until the FM approves and the NTE is raised on the WO.
- **Safety first.** In an emergency or safety situation, make it safe within the NTE, then stop and call the FM.
- **The WORQ email is the heads-up.** No separate pre-submission call is required — the email carries enough detail (cost, condition, recommendation) for the FM to decide how to handle it.
- **Techs recommend, FMs decide.** Vendor, repair-vs-replace, and capital type are the tech's best judgment on the ground, not the final call — the FM confirms each at review or close-out.
- **Every job goes through WORQ.** Email crewos@bmo.com with WORQ at the start of the body. Jobs over \$499 also need the estimate approved in Carego.
- **Every job is classified** as Repair, Unplanned Capital, or Future Capital before close-out.

This process improves financial accountability, spend visibility, capital tracking, and governance compliance.

Open Questions for FM Review

These were raised with the FM (Van) alongside the v4 flowchart and are not yet resolved in this document:

1. On bigger jobs, does the Carego estimate get approved before the work order is produced, or is the WO produced first and the estimate follows?
2. Does the \$499 threshold include internal labor, or just materials/vendor cost?
3. Expected turnaround time for approving requests over \$499, so expectations can be set with the techs.
